

Lab 6 - Working With Postman

Using a web API of your choice (use Google Books if you can't find one that interests you), send 5 separate GET requests in Postman to get JSON responses. You should try to refine your request to get a single JSON object per response. Save the responses as .json files and hang onto them for next week's lab.

Tip: You may have to research how the web API you chose handles requests, e.g., the Google Books API we looked at in class had a specific URL associated with retrieving a resource.
